Profile

Senior software engineer with 5+ years building ecommerce applications in React, GraphQL and TypeScript at Express, a storefront with about 5 million monthly users. Focused on making other developers faster, from shared libraries to the AI tooling the team now uses every day.

Skills

Frontend	React, TypeScript, JavaScript, Tailwind CSS, Vite, Webpack, Storybook
APIs	GraphQL, Apollo Client, Apollo Server, Node.js, REST
Testing	Jest, React Testing Library, Playwright, test-driven development
Ops & AI	GA4, TrackJS, Google Cloud Logging, Claude Code, MCP servers

Work Experience

Dec 2025 – Present — **Senior Ecommerce UI Engineer**, *Express*, Columbus, Ohio

- Lead frontend AI adoption: set up the team's AI tools, gave talks on how AI works and wrote the team's agent docs. The team now uses agents in daily work, and leadership asks for input on how the company documents code for AI.
- Built Quoth, an MCP server that gives agents data from the storefront's GraphQL and Java endpoints. A missing price used to mean tracing three systems. Now an agent finds the cause, like an unset clearance flag.
- Moved analytics from Adobe to GA4 to cut costs during restructuring, and now own the data layer and reporting.
- Serve on the production on-call rotation through peak traffic like Black Friday: troubleshoot live issues with Google Cloud and TrackJS and lead incident response. Wrote the on-call survival guide from two years of notes on past fixes.

June 2021 – Dec 2025 — **Ecommerce UI Engineer**, *Express*, Columbus, Ohio

- Led five contract developers moving search from Unbxd to Google Retail Search: wrote the tickets, reviewed the code and wired up the API through GraphQL. Shipped before code freeze. Searching red shirts now returns only red shirts.
- Fixed open community issues and interaction bugs that hit express.com, and became one of four maintainers of pure-react-carousel: 67k weekly downloads.
- Built Shop My Store, part of a company push to get online shoppers into stores by showing what's in stock nearby. Also built buy online, pick up in store (BOPIS) and a visual navigation filter for category pages.
- Cut unnecessary re-renders and fixed memory leaks in the storefront header, which loads on every page.

July 2017 – March 2021 — **Customer Service Representative**, *Spectrum*, Zanesville, Ohio

- Solved high-volume support issues and explained complex technical problems to customers who aren't technical.

Projects

Odin, Claude Code Skill

Grew from a context-engineering experiment into a plan-to-PR pipeline for Claude Code with human approval gates. After each task, a look-back step proposes fixes to the skills and rules the agent follows, so the same mistake doesn't happen twice.
Claude Code, Python
github.com/Conor-Hinchee/odin

heap-analyzer

Finds memory leaks in Node.js apps by diffing heap snapshots. Built on Facebook's memlab and published on npm.
Node.js, TypeScript, memlab
